

## **SCHEMA ELETTRICO**

**Condensatori fissi:** tolleranza  $\pm 5\%$  salvo diverse indicazioni.  
**Condensatori elettrolitici:** — 20 + 100 %, tensione di lavoro 15 V salvo diversa indicazione.  
**Resistori fissi:**  $\pm 5\%$ , potenza dissipabile 0.25 W salvo diversa indicazione.  
**Potenziometri:** tolleranza  $\pm 20\%$ .  
 Le tensioni continue sono misurate senza segnale rispetto allo chassis con voltmetro di  $R_1 = 10$  M $\Omega$  e con alimentazione 14 V.  
 Le tensioni continue sullo stabilizzatore, sul preamplificatore e su Q 503 sono misurate in fase di riferimento.
